About me

After 10 years as a non-commissioned officer in the French Army, I decided to move into the digital sector. Having obtained a degree in web development, I would now like to specialize in cybersecurity, a field that echoes my background and my appetite for risk management.As part of this approach, I am looking for a Apprenticeship program with a rhythm of 3 days at the company and 2 days at the school starting in September 2024, and hope to have the opportunity to deepen my cybersecurity skills within a company that combines innovation and ethics. Autonomous, curious and a team player, I'm ready to put what I've learned to work for a team and ambitious projects. Finally, my military career has forged in me rigor, resilience and adaptability, qualities that I fully intend to put to good use in the field of IT security. I'd like to think that my experience and personality will make me a valuable asset to your team.

training

Cyberdefense Master's Degree "Data, network and systems security manager". **Sep 2024 - Jun 2026**
Hexagone School, Versailles

Application designer and developer" license **Jun 2022 - Mar 2024**
